

MODULE 1: PERCEPTION AND ATTENTION

Introduction to Cognitive Psychology

KEY DEFINITIONS

What is Perception?

Perception is the process of organizing and interpreting sensory information. It allows us to recognize meaningful objects and events.

MODELS OF ATTENTION

Broadbent's Filter Model

Information passes through a sensory buffer. A filter selectively passes information based on physical characteristics, preventing information overload.

COGNITIVE BIASES

Common Perceptual Biases

Confirmation Bias: favoring info that confirms existing beliefs.

Inattentional Blindness: failing to see visible objects when attention is directed elsewhere.

PRACTICAL EXERCISE

Discussion & Application

Case study time: How do the concepts of attention span apply to modern UI/UX design in smartphone applications? Group debate in 5 mins.
